Challenge Math Book 25

Fill in the missing numbers. How? The sum of the four surrounding numbers is in the center of each square.

Exactly one of the four numbers has to be one of these numbers: 28.5, 15.9, or 18.4.

The other three numbers have to all be DIFFERENT and must be from these: 7.5, 0.9, 3.5, 1.9, 5.2, 8.5, or 6.4.

Robert loves art. He doesn't like to draw or paint. He likes to tape stuff together, and he LOVES to use scissors.

"I am what's known as an artissor. It's a fine distinction that is much preferred over mere artists," Robert says to try to annoy Holly.

"That's not a thing! I'm telling," cries Holly.

Miss Keknew couldn't help herself. "Yes, that's not really a real thing."

"It is!" Robert said, as he cut and made 18 squares of paper. Each piece was so tiny. It had only 1 cm on each side.

"I will now make a rectangle by arranging these pieces of paper together, without overlapping. But not just any rectangle; this will be the biggest possible rectangle by perimeter that is possible using these 18 pieces of paper."

If Robert does what he says, what is the perimeter of the rectangle he makes?

By the way, if you showed a picture of it, that would be cool, too!

Name: _____

Robot was given a math problem to solve.

One hundred thirty people entered the sandcastle-building contest. Each person was given 12 gallons of sand for building. How many cups of sand were given to the contestants in all? (Note: There are 16 cups in one gallon.)

Robot wrote this program in Python to solve it.

```
number_of_people = 130
gallons_of_sand_per_person = 12
cups_in_one_gallon = 16

total_cups_of_sand = number_of_people * gallons_of_sand_per_person *
cups_in_one_gallon

print(total_cups_of_sand)
```

Robot's program will print the answer to the math problem.

What will the program print out? Fill in the blanks.

Hint and a Question

To multiply in Python `*` is used.

```
test_multiply = 7 * 14 # assign 98 to the variable test_multiply
```

```
print(test_multiply) # this would print test_multiply to the screen
```

Write a line of code to calculate the product of 6 times 15 and store it in the variable `cookies_to_bake`.

Name: _____

Robot wrote this program to solve a math problem.

Annabelle "Toothless" Dawson was a mean pirate who spent most of her time counting her gold coins.

She certainly didn't spend it!

Today was a boring day at sea, and no other ships were in sight. It took her 4 hours and 10 minutes to count all of her gold coins.

That included 15 minutes when she was not counting her gold. She thought she heard someone drop gold across the ship. She was wrong, but you wouldn't want to tell her that!

When she is counting, she counts exactly 80 coins in 10 minutes.

How many gold coins does she have?

Show your work.

Name: _____

Secret Mission: You have been hired to develop and evaluate robots' math skills. Sometimes, they give thorough, correct explanations. However, they occasionally go haywire.

Robot Rita was given a math problem to solve.

Jacob was having so much fun making cupcakes for his class.

He made $2\frac{1}{2}$ dozen of them! But there are only 20 kids in his class. Everyone ate one cupcake except for Emily, who does not like cupcakes. How many cupcakes are left over?

Robot Rita thinks this might be the answer:

He made $2.5 \times 12 = (2.5 \text{ times } 12=30)$ 30 cupcakes.

Emily didn't eat a cupcake so $20 - 1 = (20-1=19)$ 19 cupcakes were eaten.

Thus, Jacob has $30 - 19 = (30-19=11)$ 11 cupcakes left over. Answer: 11.

Robot Rita did not explain too much. How do you think Robot Rita could have shown her work better?

Name: _____

She is not sure that is correct, so she asked Robot Rob for help. This is how he tries to solve the problem.

A dozen equals to 12, so $2 \frac{1}{2}$ dozens would be $2 \text{ times } 12 + 6 = 30$ cupcakes. When every student except Emily ate a cupcake, that means $20 - 1 = 19$ cupcakes were eaten. So, if we subtract the number of cupcakes eaten from the total amount made, we find that $30 - 19 = 11$ cupcakes are left over.

If you were the teacher, how would you grade Robot Rob's work? Explain and also make comments in Robot Rob's work.

Hint: EdHelper's answer pages gave this answer.

11 cupcakes

☐

Levi Strauss traveled from his home in Bavaria, a distance of approximately 4,014 miles, to join his brothers in New York City. Just a few years later, he traveled from New York City to San Francisco, California, approximately 2,501 miles. How much further was his trip from Bavaria to New York City than his trip from New York City to San Francisco?

Kayti sat down to read one of her books. She loved to read. Since Kayti was a mouse, her books were very small, only half inch high and one-seventh inch wide! Oh, but there were wonderful stories in them, no matter how small they were! Kayti read for 42 minutes, then she stopped to make tea. She read for another 48 minutes, and then stopped to have lunch. After lunch she read for 67 minutes and finished her book. How long did Kayti read in all? Express your answer in hours and minutes.

Mrs. Thompson has 50 books for her class. There are 13 students in the class. If she gives each student the same number of books, how many books will be left over?

Jacob is between a rock and a hard place. His car gets 23 miles to the gallon. He has about 4 gallons left in the tank. How much more gas does he need to drive the remaining 182 miles home?

Mr. Young said that only 4 out of 22 dogs are chosen to pull sleds in the Iditarod. If that were true, how many dogs out of 89 would be chosen?
