Name: _____

Amy runs a candy store. She only sells gummies, lollipops, and pieces of chocolate. The store sure keeps her busy. Today she had to arrange 3,243 gummies in containers, showcase 1,456 lollipops, and if that wasn't enough, she needed to find room to put 1,966 pieces of chocolate into the display cases. When she was all done, she found another box of lollipops. It had another 614 lollipops to put away. After she is done, how many lollipops will be available for sale in her store?

Sara and Anne are playing a board game where they collect paintings. So far, Sara has 9 paintings. She only has half as many paintings as Anne. The game comes with 31 paintings. How many paintings are left for them to get?

Find three numbers whose sum is 420 and write the equation.

Name: _____

Show what 7×3 looks like by drawing an array. What is the answer?

"Fine," said Emily to her brother David. "I'll let you have my Legos for a dollar, but you will have to walk the dog for me this week."

"Deal!" said David. He went to his room to get a dollar bill, but all he had was coins. "How did that happen?" he thought.

He counted 5 dimes, 24 pennies, and 5 nickels. Does he have enough money?

If he does, what should he give Emily?

If he does not, how much money does he need?

Mrs. Jones wrote the numbers 6 and 24 on the board. She always had a weird way to teach math. "Now, class," said Mrs. Jones. "My printer is broken. Please write your own math problem using these numbers."
